Successful closing of WTE acquisition: STRABAG becomes full-service provider across entire water value chain

Essen/Vienna, 3 March 2026

- **Successful closing of WTE acquisition**
- **Expansion of growth market for water infrastructure in line with Strategy 2030**

STRABAG SE has successfully completed the acquisition of WTE Wassertechnik GmbH (WTE) from EVN Group. With the closing of the transaction, STRABAG has reached another milestone in implementing its Strategy 2030 and significantly expands its portfolio in the high-growth water infrastructure sector.

Strategic value added: expansion of service portfolio

With the acquisition of WTE, STRABAG is systematically strengthening its position along the entire water infrastructure value chain. While STRABAG already has comprehensive expertise in the design and construction of water management facilities, WTE enhances the existing portfolio, particularly in the areas of engineering, process technology and plant engineering. WTE also complements the portfolio in the long-term operation of complex water and wastewater infrastructure projects, as well as in the planning, construction and operation of mono sewage sludge incineration plants.

In line with Strategy 2030, the acquisition contributes to STRABAG's evolution into a full-service provider for water infrastructure – from project development, design and construction through to operation, modernisation and lifecycle management.

Attractive market conditions in water infrastructure

The market for water and wastewater infrastructure is characterised by long-term stable investment cycles and strong demand from both the public sector and industry. Globally, the need for resilient, efficient and sustainable water solutions is increasing – both in the municipal sector and in water-intensive industries. These structural conditions make this business area an attractive, counter-cyclical growth market offering long-term planning certainty.

Concrete impact of the transaction on STRABAG

As a result of the acquisition, STRABAG will increase its annual output in the water infrastructure sector by approximately € 300 million. Earnings will be fully consolidated in the Group financial statements from the closing date.

Next steps: integration and joint growth

Following the closing, the focus will be on the structured integration of WTE into the STRABAG Group. WTE will be organisationally assigned to the International & Special Divisions segment and closely integrated with the existing water expertise within the STRABAG Group.

Combining WTE's technical expertise with STRABAG's financial strength, international footprint and delivery capability should unlock additional growth potential.

▀▀ With the successful closing of the WTE acquisition, we are taking a strategically important step for STRABAG. Water infrastructure is a key future market with high social relevance and long-term stable growth prospects. By pooling our expertise, we are becoming a full-service provider in this field and are creating an excellent foundation for sustainable, profitable growth in line with our Strategy 2030.

About STRABAG SE

STRABAG SE is a European-based technology group for construction services, a leader in innovation and financial strength. Our activities span all areas of the construction industry and cover the entire construction value chain. We create added value for our clients by taking an end-to-end view of construction over the entire life cycle – from planning and design to construction, operation and facility management to redevelopment or demolition. In all of our work, we accept responsibility for people and the environment: We are shaping the future of construction and are making significant investments in our portfolio of more than 250 innovation and 400 sustainability projects. Through the hard work and dedication of our approximately 89,000 employees, we generate an annual output volume of around € 20 billion.

Our dense network of subsidiaries in various European countries and on other continents extends our area of operation far beyond the borders of Austria and Germany. Working together with strong partners, we are pursuing a clear goal: to design, build and operate construction projects in a way that protects the climate and conserves resources.
