

Scientifically confirmed: SBTi validates STRABAG's climate targets

Vienna, 19 March 2026

- **Science Based Targets initiative (SBTi) validates the construction group's climate targets through to 2030**
- **Three key levers for science-based pathway to emissions reduction**

The Science Based Targets initiative (SBTi) has validated STRABAG's carbon reduction targets. By 2030, the company has committed to reducing its own emissions and those from purchased energy by 42 percent compared to 2023. In addition, a quarter of the emissions generated along the value chain – primarily from purchased construction materials and the use phase of buildings and infrastructure – are to be reduced.

Three key pillars are intended to significantly reduce STRABAG's emissions. A large share of the Group's passenger cars and commercial vehicles will be electric in future. In addition, around two thirds of construction machinery must be converted to renewable energy sources. Alongside the use of HVO, STRABAG is focusing on alternative powertrain technologies for heavy construction machinery, such as a hydrogen-powered wheel loader in Austria. As a third key measure, emissions from asphalt mixing plants are to be gradually reduced. To lower emissions from upstream and downstream activities along the value chain, STRABAG is focusing on low-emission materials, efficient planning and closer collaboration throughout the supply chain.

Science-based transformation towards an ecological business model

▮▮ The validation of our climate targets by the Science Based Targets initiative shows that our sustainability strategy is on the right track. Credible climate targets must be transparent, comparable and science-based. Moving away from fossil fuels towards renewable solutions is essential. To achieve this, we as a company must work hand in hand with our customers, suppliers and policymakers.

Dr. Marco Xaver Bornschlegl

Head of Central Division STRABAG Innovation & Digitalisation

The Science Based Targets initiative (SBTi) is a coalition of several non-governmental organisations (NGOs). Since 2015, more than 1,000 companies worldwide have joined to set scientifically grounded climate targets. Participating companies commit to reducing their CO₂ emissions consistent with limiting global warming to 1.5 °C in line with the goals of the Paris Climate Agreement. STRABAG announced its commitment to SBTi at the end of 2024. Following a thorough review, the NGO has now validated the company's near-term targets through to 2030.

About STRABAG SE

STRABAG SE is a European-based technology group for construction services, a leader in innovation and financial strength. Our activities span all areas of the construction industry and cover the entire construction value chain. We create added value for our clients by taking an end-to-end view of construction over the entire life cycle – from planning and design to construction, operation and facility management to redevelopment or demolition. In all of our work, we accept responsibility for people and the environment: We are shaping the future of construction and are making significant investments in our portfolio of more than 250 innovation and 400 sustainability projects. Through the hard work and dedication of our approximately 89,000 employees, we generate an annual output volume of around € 20 billion.

Our dense network of subsidiaries in various European countries and on other continents extends our area of operation far beyond the borders of Austria and Germany. Working together with strong partners, we are pursuing a clear goal: to design, build and operate construction projects in a way that protects the climate and conserves resources.
