- **Acquisition of Sandkamp Tiefbau GmbH by STRABAG AG**
- **All employees taken on**
- **Integration into STRABAG Subdivision North, Business Unit Nordhorn**

Cologne, 16 June 2025 STRABAG AG, Cologne, acquires Sandkamp Tiefbau GmbH from Gronau, thereby further expanding its regional competitive position in pipeline construction for public utility providers. All 25 Sandkamp employees will be taken on and join the STRABAG team in Nordhorn and Gronau.

The Nordhorn division has been active for many years as a specialist partner in the public utilities sector. With the acquisition of the certified family business, STRABAG gains valuable specialists and strengthens its customer relationships and local market presence in Westmünsterland. The expanded personnel capacities also enable even closer cooperation with other Group units to better utilise synergy effects in the region.

"There is a lot to do in the region, so we are all the more pleased that we can further expand our business area with this acquisition and welcome new, highly committed colleagues to our ranks," explained Dirk Jacobs, Commercial Manager of the STRABAG Business Unit Nordhorn.

As a medium-sized specialist company, Sandkamp has been working in pipeline, cable and sewer construction for utility service providers in the region for more than 100 years. "After many generations of ownership, it was essential to us to develop a long-term perspective for our company and our valued employees. I am delighted that we have found the ideal partner in the Nordhorn unit of STRABAG and that our team is in safe hands for the future," says owner Johannes Sandkamp.

The acquisition will take effect retroactively from 1 January 2025; the parties have agreed not to disclose the purchase price.

The success story of STRABAG AG, Cologne, began in 1923. Today, the company is part of the Austrian STRABAG SE Group and acts as the parent company of the German STRABAG Group companies in Germany. As the German market leader in road construction, the company generates an annual output of around €4 billion in this business segment with almost 14,000 employees. From digital planning to the extraction and production of construction materials, the construction of projects, maintenance and servicing by the company's road operation services, through to demolition and reuse - STRABAG's units cover the entire value chain in the construction of infrastructure facilities, take a lifecycle-oriented approach to projects and consistently integrate innovation, digitalisation and sustainability into their processes. Together, in close collaboration with strong partners, the company is pursuing a clear goal: to make construction resource-efficient and climate-neutral.
